Abstract (en)

[origin: WO0109265A1] The invention concerns a plug based on polymers characterised in that it uses a composition or pre-mixture based on volatile corrosion inhibitors comprising in an efficient amount at least a structuring agent consisting of a solid or pasty substance whereof the melting point is between 40 and 110 DEG C, preferably between 50 and 90 DEG C. The invention also concerns the use of said plug for internally protecting hollow metal parts against corrosion.
