Abstract (en)
[origin: WO0109426A1] The invention relates to a laundry treating machine. The one or more heating elements (32) are located in a heating chamber of the laundry treating machine, especially a washing machine. The heating chamber extends downwardly from the periphery of a tub (4) and is linked with a pumping device (20). The inventive laundry treating machine allows reduction of the amount of liquid required for safely covering the heating element.
