Abstract (en)

[origin: WO0208701A1] The invention relates to a device comprising a sensor support, which is provided with a sensor element that is inserted into the flowing medium. According to prior art, the metal sensor support is mounted onto a component of the device. The component comprising the sensor support must be present in order to install the measuring element. The inventive sensor support (20) is produced separately and the sensor element(s) (33) can be inserted immediately into the sensor support (20). The sensor support (20) is attached, for example, by adhesion to one component of the device (1).
