Abstract (en)

[origin: WO0106459A1] The invention concerns a method for displaying an image in a data processing equipment comprising the following steps: (a) connecting to a server system; (b) transferring to the equipment an initial digitised image (I) capable of being modified by processing; (c) transferring to the equipment a mask (M) associated with the image and capable of delimiting at least a predetermined zone (Z1, Z2, Z2') of said image wherein a modification processing can be performed; (d) using an input interface of the equipment, the user selects a modification, in particular a new colour, to be applied to the or each zone; (e) constructing a new image (I') from the initial image; and (f) transferring the new image to a display memory.
