Abstract (en)  
[origin: WO9953742A2] Hearing perceptions are inputted (5) into an adaptation calculator (3) that calculates the changes to be made in the parameters (  $\alpha$  x) of the hearing aid transmission function and transmits them to the hearing aid (7). The calculator (3) determines which audio test signal (T) is to be pressed on to the person using the hearing aid. To this end, the hearing aid adapting device comprises the above-mentioned calculator (3) and an audio storage medium-playback unit (9). The calculator (3) controls (E9) which audio test signal is to be played back.
