Abstract (en)
[origin: EP1205592A1] The cabinet has a drying chamber (1) and an equipment part (3) with a heat pump consisting of an evaporator unit (15), a compressor (27) and a condenser (25) and an air circulating element (35). At least one additional air channel in the equipment part enables at least some circulated air to pass at least approximately unhindered through the equipment part to be fed into the dryer chamber again at least approximately untreated. Independent claims are also included for the following: a method of operating a washer-dryer cabinet and a use of the dryer cabinet for textiles and similar materials, fabrics and materials containing fabric.
