Abstract (en)
[origin: EP1206023A1] A stackable electric installation apparatus (10) has matable male and female connections (13,14) on the sides of the insulating casing (11). The sides form a funnel when joined with a locking spring catch and bar beneath it which is accessible through the funnel using a screwdriver to separate the parts. A stackable electric installation apparatus (10) comprises an insulating casing (11) having male and female connections (13,14) on the front sides (12), which have half-funnels (16) forming a funnel when connected. Beneath the funnel is a spring catch on one side (20) and a bar on the other, the spring catch being accessible through the funnel, which is itself of such size as to accommodate a conventional electric screwdriver.
