Abstract (en)

[origin: US6729640B1] A thruster (2) arranged in the longitudinal direction of the ski has a section which is fixed to the ski and an area (3) which is located at a distance from said thruster and which can be moved in a longitudinal direction of said ski and which is coupled to an abutment, which is also fixed to the ski by means of a hydraulic damper (10) via a hydraulic suspension (10). In order to enlarge the lifts of the damper (10), a multiplication gear is located between the damper (10) and the movable area (3), more particularly in the form of a lever gear (6).
