Abstract (en)  
[origin: WO0115845A1] The invention relates to a clamping device, comprising clamping surfaces which are designed to be brought into contact with the surfaces of the workpiece and a drive unit for generating corresponding displacements between the machining unit and the clamping device. According to the invention, the clamping device (3) has at least two clamping jaws (15a, 15a'; 15b, 15b') which can be repeatedly reused and the clamping surfaces (21, 21'; 22, 22') of the clamping device (3) which are configured on the clamping jaws (15a, 15a'; 15b, 15b') correspond to at least one section of a desired shape for the workpiece.
