Abstract (en)

[origin: WO0112958A1] A valve drive in particular for combustion engines of motor vehicles comprising of a powered cam element (2), a valve control member which can be moved or rotated by the cam element (2), and a flexible enveloping element (4), in which the cam element (2) is rotationally mounted. The enveloping element (4) is movably connected to the valve control member in the plane perpendicular to the axis of rotation (8) of the cam element (2).
