Abstract (en)
[origin: US6776547B1] A keyboard housing for a key array of a depressible-key keyboard. A parallel guide for multi-wide keys is configured in such a way in the keyboard housing that a swiveling crank arm is limited against longitudinal displacement at both ends and, by two support ribs, is positioned in a vertical direction that its position corresponds precisely to that of the depressed multi-wide key. If the complete set of keys is inserted into the housing and pressed as far as the end stop, the swiveling crank arm latches into snap-in apertures of the multi-wide key, thus becoming functional. The keyboard housing can be used for keyboards produced by automation.
