Abstract (en)

[origin: WO0104981A1] The invention concerns a fuel cell (1) or a stack of fuel cells comprising cathodes (2), electrolytes (3), anodes (4) and interconnection plates (5, 5') arranged in parallel layers, and at least a metal lattice (6, 6') inserted between the anode (4) and the interconnection plate (5) for a flexible bonding. The inventive fuel cell is characterised in that the metal lattice (6, 6') is protected against oxidation.
