Abstract (en)

[origin: EP1207026A2] The adjustment device has a position-reporting indicator (116) acting as a gauge, a magnetic measuring body (110) as a length scale for the cutters (113) on the cutter shaft (112), mobile relative to each other, and a magnetic field detection sensor (132). A detector element (114) reports the position given by the indicator.
