Abstract (en)

[origin: WO0045311A1] A method and a device for exchange of information between a main device (24) and an electronic device (10) present in the vicinity of said main device (24) and equipped with a computer unit (11), said connection means (23) being provided to connect computer unit (11) wirelessly with the main device (24) via a communication unit (22). An installation module (28) is executed continuously in the computer unit (11) so that at least a data or program module (19; 18) is received wirelessly and automatically in computer unit (11) by means of the installation module (28). The received data or program modules (19, 18) are automatically made available in the computer unit.
