Abstract (en)  
[origin: WO0126320A2] A system (1) for establishing a data transmission link for the transmission of information data (ID) between a communication device (3, 7) and an information device (4, 5, 8), the system including a mobile data carrier (9, 10, 11) for the storage of link information (LI), and including the communication device (3, 7) for reading the link information (LI) stored in the data carrier (9, 10, 11) and for supplying the link information (LI) thus read to a link device (6) of the system (1), in which the link device (6) has link memory means (24) in which address information (AI) of an information device (4, 5, 8) is stored in correlation with the link information (LI) received by the link device (6), and in which upon the reception of the link information (LI) the link device (6) can supply the address information (AI), stored in the link memory means (24) in correlation with the received link information (LI), to the communication device (3, 7) for establishing the data transmission link between the communication device (3, 7) and the information device (4, 5, 8) identified by the address information (AI).
