Abstract (en)

[origin: FR2785694A1] The invention concerns a system for customizing smart cards wherein the data must be registered so as to be adapted to the use for which they are designed. The invention is characterised in that each customizing machine (MP1 to MP4) comprising several customizing stations (PP1 to PP6) is connected to a computer (PC) equipped with a multiway card (CM) by a serial type computer connection (LS) of the multiway card which transmitshe cryptographic data of peripheral devices (DEP1 to DEP6). The customizing data are supplied by a control device (DC) via a communication bus (BC). The invention is applicable to microprocessor cards.
