Abstract (en)

[origin: EP1209056A1] Cable-drawn transport system having a continuously moving cable and vehicles provided with removable coupling clamps comprises in the stations an uncoupling rail and a coupling rail of the coupling clamp on the cable. The coupling rail is flexibly positioned and is assigned a flexible roller (23) which supports the haulage cable (7) between two fixed guide rollers. Preferred Features: Symmetrical to the highest stroke the uncoupling/coupling rail is supported by a bearing consisting of a block fixed to a fixed structure, a pivoting arm attached to the block and the uncoupling/coupling rail, and a spring tensioned between the block and the uncoupling/coupling rail, whose spring axis forms an angle opening upward with the axis of the pivoting arm.
