Abstract (en)
A closing device for casks comprises a main body (2) to be sealingly inserted into a through hole of a wine-making container, and an active member (3) connected with the main body (2) to enable the gases accumulated within the wine-making container to expand externally of the container itself; the active member (3) comprises a venting duct (5) formed in the main body (2) and a shutter element (4) operatively active in the venting duct (5).
