Abstract (en)

[origin: EP1209313A1] The door panel preventing break-in is composed of profiles and has a door filling with a core (4) concealed on both sides with plates (2,3). The core has at least one aperture closed by glazing (5) held by insert profiles (10,11). The insert profiles (11) arranged on the door panel inside have holding devices which prevent their movement. The holding devices are formed as recesses (30). On the door filling projections are provided for engagement in the recesses of the insert profiles. Additional reinforcement bodies (16) are provided in the form of profile strips, which are arranged abutting on the aperture in the area of its arch surface. The reinforcement bodies from the door panel inside are held by a fixture screw with an extending head.
