Abstract (en)

[origin: EP1209409A2] The light has one or more lamps arranged in a reflector (1) with a light outlet opening so that light from the lamps is reflected to the opening. The reflector has a roof section (7) and one or more side walls (91-93). At least one coherent region of the reflector near the side walls at least partly scatters light and at least one other region (15) reflects light essentially directionally. Independent claims are also included for the following: a method of manufacturing a reflector for a light.
