Abstract (en)

[origin: EP1209417A1] A method of operating a gas-burner for a heating device and using an ignition-burner and monitoring of the functioning of the ignition- and main-burner with an ionization electrode used as a measurement electrode in the flame zone. A safety-switch-off results when a specified threshold value (SW) of the electrical magnitude derived from the ionization signal during the ignition burner operation is not attained and/or during the ensuing main burner operation is not exceeded, and when the flame signals exceed or fail to attain specified absolute threshold values (S-OHB, B-OHB or UHB) in the control operation.
