Abstract (en)
[origin: EP1209424A2] The device is for facilitating the dismantling of a hot water heating body (1). It incorporates at least one cut-off valve (2,3) which on dismantling remains on the heating body. The valve(s) is/are a component/components of screw-in pipes for the heating body, installed between the building-side forward flow and back flow and the heating body-side forward flow and back flow connections. The cut-off valve is a ball valve (4). Its bore (8) through the screw-in pipe is eccentric. The operating component (5) of the ball valve is fitted through the thicker wall part (9) of the screw-in pipe.
