Abstract (en)
[origin: EP1209634A2] The device has path bearer plates with a coin channel between them, an insertion slot, a path on the coin path bearer plate, a sensor arrangement for checking coins on the path in real time and damping arrangements for partly absorbing energy of the inserted coins and forcing coins against a channel wall. A damping element (30) has a row of flexible sections at an angle to the direction of coin motion between the channel walls.
