Abstract (en)
[origin: EP1209767A2] A pluggable connection for furniture light includes a device socket outlet (1) which has a separating wall between the contact elements. The contact elements of the plug (3) lie inside a cylindrical enveloping surface of the plug housing, and this separating wall extends in the plug-in direction between the contact elements of the plug (3), in which further the separating wall juts up in the plug-in direction relative to a transversely extending plane through the contact points between the contact elements of the device socket outlet (1), on the one side, and the plug (3) on the other side.
