Abstract (en)  
[origin: WO0202062A1] The invention relates to the use of physiologically compatible salts of inorganic or organic acids for improving the absorption qualities of anionic direct dyes. Also disclosed is a two-step procedure for colouring fibres, in addition to a multicomponent agent for non-oxidative fibre colouring ( in particular, keratin fibres such as human hair) whereby one component contains a colouring agent based on anionic direct dyes and another component contains physiologically compatible salts.
