Abstract (en)

[origin: WO0117510A1] The invention relates to an agent for stimulating bowel function and/or for improving and/or normalizing the action of the bowels. The inventive agent contains a material in the form of a spongy structure that comprises three-dimensional polymer meshes. Said structure is provided with a compound that is exclusively soluble in the intestines, if the material can be decomposed in the stomach and/or the small intestine. The invention further relates to a method for producing such an agent and to the use thereof.
