Abstract (en)

[origin: WO0114412A1] The present invention relates generally to new compositions of matter and methods of using such compositions of matter for investigational or therapeutic purposes, and more particularly to compositions that a) mimic beta -strands, b) block beta -sheet dimerization of proteins, c) block protein-protein beta -sheet interactions and/or interact with proteins by beta -sheet formation and as well as d) methods for investigating or designing compounds that mimic beta -strands and/or beta -sheets, e) methods for treating diseases or disorders by administering therapeutically effective amounts of such compounds to human or veterinary patients and f) methods for using a new protecting group (i.e, 2,7-di-*< i>tert</i>-butylfluorenylmethoxycarbonyl(Fmoc\*)) in peptide syntheses.*
