Abstract (en)

[origin: WO0114597A1] The invention relates to a method for manufacturing wet-cleanable combination clothing of fabric and fur. In the method, the fur pelt (2) of the fur is moistened with an organic fluorochemical, and the pelt is dried and/or treated with heat, so that a permanent, microscopically thin water-repellent layer is formed onto the surface of the collagen fibre of the pelt. The fur hair (3) of the fur is also moistened with an organic fluorochemical and dried by using heat treatment, so that a permanent, microscopically thin water-repellent layer is formed onto the surface of the keratin fibre of the fur hair. Finally, the fur part (1), which has been processed to endure wet cleaning, is fastened to the wet-cleanable fabric part (5) of the clothing either fixedly or detachably. The invention also relates to the repeatedly wet-cleanable combination clothing of fabric and fur according to the introduction of claim (9).
