Abstract (en)

[origin: WO0046732A1] A system and method for providing integrated interactive access to at least one business functionality makes use of computer software and hardware and allows the user to access a service provider's hosted application (S1) and enter a selection for at least one business functionality (S5, S7). The user is provided interactive access to the selected business functionality (S8) via the service provider's hosted application and via links, for example, from the service provider's hosted application to one or more third parties' hosted applications. In addition, the selected business functionality is automatically integrated for the user, for example, with one or more other business functionalities of the user.
