Abstract (en)

[origin: DE19939717A1] The operating device includes a baseplate (4) which can be assembled in different positions, displaced about a drive axis (22). A ridge (41) includes an inwardly extending edge segment (42). The rotary handle (5) is operatively connected to a drive plate (6) arranged within the ridge. A ridge-shaped edge segment (62) is provided on the drive plate. In the off position, the two edge segments extend to form a complete circle.
