Abstract (en)

[origin: WO0118886A2] The inventive components comprise the following elements: a glass substrate (11), an organic light-emitting diode (12) arranged on said glass substrate (11), and; a glass cover (13) which is arranged over the organic light-emitting diode (12) and which is glued, on the edge (14), to the glass substrate (11). The glass cover is made from a glass plate by three-dimensionally removing material from the same using a beam method.
