Abstract (en)

[origin: WO0115356A2] The invention relates to a car radio with a memory in which audio signals can be stored. Said memory is configured in the form of a hard disk. An audio signal memory in the form of a hard disk offers the advantage of high storage capacity - the hard disks of approximately 8 Gbytes usually used today provide around 15 hours of CD - quality audio signals- with a small construction size and low production costs.
