Abstract (en)
[origin: US2002062754A1] A device for providing cleaning or other solution in a printing press including a spraying device, the spraying device having a liquid exit disposed along a width of the spraying device for delivering a liquid to a press component and a spray shield selectively covering at least one part of the liquid exit so as to block delivery of the liquid through the at least one part to the press component. Also disclosed is a method for providing cleaning or other fluid to a printing press component comprising the steps of spraying a fluid over a fixed width of a press component, and blocking part of the fluid over a part of the fixed width so that the part of the fluid does not reach the press component.
