Abstract (en)

[origin: EP1211580A1] Watch (1) has a battery held in a trap formed by a recess (6) with a cover that can be locked in place on the watch case (2) to hold the battery in place. Electric contacts (10) to the watch components have connection terminals in the battery recess. The connection terminals can be accessed from the outside once the cover has been removed, without having to also remove the battery. An Independent claim is made for an electronic module for use in a watch.
