Abstract (en)

[origin: WO0121250A1] The invention relates to a container (1) for receiving a pharmaceutical agent, particularly ointments, gels or the like, comprising at least one flexible container wall (2), the said container being designed to be placed on the skin and provided for this purpose with a pattern of recesses (4) for the passage of said pharmaceutical agent. The container is embodied in such a way that a dosing device (11;111) is included in the container. Said dosing device makes it possible to close or open at least one portion of the recesses (4) designed for passage of the pharmaceutical agent (Fig. 4).
