Abstract (en)

[origin: EP1084766A1] The invention concerns a device for painting characterised in that it comprises a support (100) formed by a handle (110), a wire (120) extending said handle (110) and forming an elbow (125) and a return bend (127) substantially transverse to the direction of the handle (110). Said device further comprises an element for applying paint (200) and means (300) for maintaining said element (200) on the support (100), means designed to be removably fixed in position on the return bend (127) of the support (100), said means (300) being capable of controlling the paint applying element (200) in rotation relative to the support (100).
