Abstract (en)

[origin: EP1213202A1] The method of displaying running conditions of a railway vehicle (21) uses sensors (10) on the individual wagons. The sensors are connected to a display (30) and use the train composition and operating parameters to generate a signal to the display. The sensors are connected to a remote radio or optical information transmission (17) to the display to give an actual display of the running conditions.
