Abstract (en)

[origin: EP1213434A1] The profiled leaf comprises a polygonal cross section module (2) having front and rear walls (3,4) connected by two edges (5). Each module has a front wall end (3a) projecting from the upper part of the adjacent edge so that the articulation connection (7) does not overshoot the front wall end in the closed position. This upper part has a concave shape tangentially joining the front wall end whose other end (3b) is ended by a shoulder (8). The edge adjacent to this end has a curved projecting surface so that in the closed position the front wall end is in contact with the shoulder of the adjacent leaf and is supported on a part of the curved projecting surface of the adjacent module.
