Abstract (en)
It comprises a base body (2) which includes a plurality of alveoli (3) for shaping the ice cubes and a cover (4) which fits over said base body (2). It is characterised in that the base body (2) is flexible and in that the cover (4) is rigid and has a plurality of ribs (11) located near the upper surface of the base body (2), each rib (11) being interpolated between two alveoli (3). It prevents direct contact with other items in the refrigerator and facilitates turning the ice cubes out of the alveoli (3). <IMAGE>
