Abstract (en)
[origin: EP1213793A2] This invention relates to a clamp element (10, 10') for making a junction between at least one phase conductor of a main cable and at least one branch cable, said element (10, 10') comprising a base support (12, 12') with means (14, 14') for receiving said branch cable and an elongate member (16, 16') projecting from said base support (12), the clamp element (10, 10') being characterized in that said elongate member (16, 16') is substantially parallel to the axis of said means (14, 14') for receiving said branch cable, so that it can be inserted underneath the sheath of said main cable, between one phase conductor and the adjacent phase conductor. <IMAGE>
