Abstract (en)
[origin: WO0117496A1] The invention relates to an oil-free skin care composition for moisturizing the skin comprising (a) a humectant comprising glycerin and propylene glycol; (b) an emollient comprising isohexadecane, cyclomethicone, dimethicone, dimethiconecopolyol and trimethyl siloxysilicate; (c) a keratolytic agent; and (d) water. The skin care compositions according to the invention accomplish effective moisturization through a combination of the softening effects of emollients with the moisture retaining action of humectants and coating activities of lubricants. The combination of ingredients counteract the effect of moisture loss, thereby keeping skin soft, smooth and supple. The compositions according to the invention are non-comedogenic and have long lasting moisturizing effects without the use of occlusive materials.
