Abstract (en)  
[origin: DE19945503A1] The invention relates to a liquid, multi-phase cleaning agent with at least two continuous phases. Said cleaning agent has at least one aqueous phase I and one non-aqueous, liquid phase II, which is immiscible with said aqueous phase I, can be temporarily converted to an emulsion by agitation and contains at least one anti-microbial active ingredient. The cleaning agent, together with a spray dispenser form a product which can be used in a method for cleaning and/or disinfecting, or hygienically treating hard surfaces, in particular, glass. According to said method, the liquid, multi-phase cleaning agent is temporarily converted to an emulsion by agitation, is applied to the surface to be cleaned and/or disinfected, or hygienically treated, preferably by spraying and said surface is subsequently cleaned and/or disinfected, or hygienically treated using an absorbent, soft object, optionally by wiping.
