Abstract (en)

[origin: DE19945506A1] The invention relates to an aqueous, liquid, multi-phase, surface-active cleaning agent with at least two continuous phases. Said cleaning agent has at least one lower aqueous phase I and one upper aqueous phase II, which is immiscible with phase I, can be temporarily converted to an emulsion by agitation and contains at least one anti-microbial active ingredient. The cleaning agent, together with a spray dispenser form a product which can be used to clean and/or disinfect or hygienically treat hard surfaces and can be prepared directly from its raw materials by first mixing them and subsequently leaving the agent to stand, in order to separate the temporary emulsion.
