Abstract (en)

[origin: WO0123692A1] The invention relates to a weather protection device comprising at least one foldable protective element (2). Said protective element has several pivotally mounted spars (4), a non-circular tarpaulin (5) which is fastened to the spars (4), and an adjustable holding device (6) with whose aid the protective element (2) is supported in its respective position. According to the invention, the holding device (6) is configured and arranged such that the unfolded protective element can turn around a vertical or around a horizontal axis and/or the height of the protective element (2) can be adjusted, and/or the protective element (2) can be tilted, and/or the protective element (2) can be swiveled around an axis (8) that is centrally provided between the outer spars (4), and/or the tarpaulin (5) can be at least partially tensioned by at least one tensioning cross member (9).
