Abstract (en)

[origin: DE19943600A1] The invention concerns a navigation system (100) for a means of locomotion, particularly for a vehicle, motor vehicle, ship or aircraft, for navigation from one location to a navigation target, by means of a radio receiver (14) in particular a car radio and a navigation device (10, 12). The radio receiver (14) is initialized by insertion of a key-card in a key-card reader pertaining to the same. Said receiver (14) is furthermore connected to the navigation device (10, 12) for transfer of navigation targets. At least one of the navigation cards (26) corresponding to the key-card can be used for optional transfer of a navigation target e.g. a tourist landmark to the navigation device (26) whereby said navigation target is contained on the card in a memory.
