Abstract (en)

[origin: EP1214958A2] The shock absorber unit (7) has two shock absorber elements consisting of a cylinder and piston rod and relatively movable in a lengthwise direction against damping resistance and positioned on the ski's upper side. One of the damper elements is fixed on the ski (1) by a thrust-piece (2); the other element is detachably connected to another thrust piece (4). A coupling part (8) cooperates with a counter-coupling part adjustable between two positions.
