Abstract (en)

[origin: EP1214994A1] A process for the realization of impressions (16-16') on metal containers (10), in particular a container of the type of cylindrical enbloc atomizing bomb obtained by means of operating steps of tapering, customized cutting, upper edging and control from an extruded, drawn or deep-drawn body (10) painted in the inside and the outside, and lithographed, said operations being sequentially carried out on a multiple station rotary table tapering machine. The process includes the steps of: providing the external surface of said body (10), before submitting it to the aforesaid operations, with at least one signal (14) obtained in an angular prefixed position with respect to the zone selected for the impression (16,16'); feeding said body (10) on the tapering machine; positioning said body (10) in such a manner that the zone prefixed for the impression be aligned with a device to obtain the impression; locking said body in the fixed position, and making at least one impression (16,16') on at least said prefixed zone of body (10) through said device. <IMAGE>
