Abstract (en)

[origin: EP1215389A2] Exhaust gas discharge device for an air intake channel system of an internal combustion engine having an air intake channel housing with a collecting inlet (4), an upper housing part (5), and a lower housing part (6) comprises an exhaust gas inlet (11) arranged in the air intake channel system which interacts with an exhaust gas return valve and a flow-guiding body (13) influencing the exhaust gas stream. The upper and/or lower housing part has form elements which form the flow-guiding body in the mounted state of the air intake channel housing. Preferred Features: The flow-guiding body is an annular step extending in the axial direction of the fresh air inlet channel and defining a ring channel (14). Openings (15) for the exhaust gas are provided in the annular step.
