Abstract (en)
[origin: EP1215438A2] The lamp fitting is designed so that the suspension and fastening systems with the C rails or the housing side walls are formed in one part structure and are integrated in the housing side walls. The lamp housing or the lamp body is designed free of openings, recesses or similar. In addition the C rails are arranged at intervals at the side surfaces of the lamp housing and are interrupted at the places of the suspension and fastening systems.
