Abstract (en)
An information carrier comprises a foil (1) which is intended to be adhered with a first side to a substrate and which displays information on an opposite, second side. The foil is provided with at least one intentional weakened portion (3) which extends laterally in the foil and therein divides the foil into a number of elongate strips (10). The weakened portion or weakened portions penetrate from the first side into the foil through only a part of the thickness thereof. <IMAGE>
